

eXPORT SOFTWARE

SOFTWARE FOR DATA CERTIFICATION REPORTS

New Software for your data certification reports for WireXpert

NEW & IMPROVED FEATURES

The eXport reporting software allows the user to centrally manage test results for copper and fibre-optic lines in a single program. Measurement data can be quickly imported with the software from the device. A new compressed file format results in small file sizes without loss of detail and allows very fast data exchange. The reports can be saved both as PDF and CSV files. Due to the additional import options for OTDR results (*.Sor), all results of a wiring project can be centrally documented. The graphs can display the individual RF parameters, demonstrating the suitability for the transmission of different Ethernet speeds. Introducing world's first List-Based Testing to generate labels and test nodes in hierarchical formats.

KEY FEATURES

- ▶ Works on Windows Vista/7/8/10
- ▶ Imports from local PC, USB drive or direct from WireXpert
- ▶ Capable of reading *.SOR file format
- ▶ Exports report to *.CSV or *.PDF file format
- ▶ Detailed results with plots
- ▶ Easy to use user interface
- ▶ Available in several languages

CLOUD FOR THE WIREXPRT SERIES

With eXport Cloud Enterprise you operate your own cloud based platform for the exchange of measurement data and measurement lists of your WireXpert series.

Project managers can use this software to obtain measurement data from various installation teams via the Internet and to control measurement projects using LBT files (List-Based-Testing).

This solution makes you completely independent of third-party cloud services, as you run the server software on your own IT infrastructure. You are in control of your data at all times, as you are always in possession of the data and the data do not have to be stored on external servers.
